

0-0-5-1S-0.25Zn-0.25Mn-0.2Fe + Biostimulant*

Derived from: Potassium Acetate, Ammonium Thiosulfate, Chelated Zn, Chelated Mn, Chelated Fe, and Plant Extracts

**(Biologically extracted Kelp Extract or biologically extracted Ecklonia maxima)*

HOW IT WORKS

With a superior formulation of rapidly available potassium, sulfur, essential micronutrients, and CropPWR® Technology targeted to promote crop health, CropLift® enhances nutrient uptake, crop performance, and crop resilience for higher yield potential.

PRODUCT BENEFITS

NUTRIENT AVAILABILITY

- Highly soluble formulation for faster nutrient uptake by crops and visible results

CROP HEALTH

- Increases crop tolerance to abiotic stressors like cold temperatures, drought, and fertilizer-induced salinity stress
- Enhances uptake and utilization of other nutrients in the plant
- Enhances overall plant performance for improved yield potential
- CropLift's biostimulant improves nutrient uptake and utilization

EASE OF USE

- Compatible with most fertilizers, insecticides, fungicides, and herbicides for easy tank mix applications
- CropLift can be applied at any growing stage, providing multiple in-season benefits that result in higher yield potential

CropLift results in more nutrients in the plant and fewer nutrients lost to the environment making it part of a sustainable 4R Nutrient Stewardship program.

**ENHANCED RESILIENCE
AND IMPROVED CROP
PERFORMANCE FOR
HIGHER YIELDS**

CROPS

Corn, Soybeans, Wheat and Cereal Grains, Alfalfa, Hay, & Forages

TIMING

In Furrow, Banded, & Foliar Applications

USE RATE

1-2 quarts/acre

Can be used alone or in tank mixtures. Please refer to the tank mix product label for application timing and restrictions.

WHAT IS CropPWR® TECHNOLOGY?

CropPWR® technology is an AcreEdge® proprietary biostimulant (Biologically extracted Kelp Extract or Ecklonia maxima) designed to boost crop performance and yield potential.
