RATE

Per 100K Gal manure:

HOG

Low rate: 2 Gal
High rate: 4 Gal

CATTLE

Low rate: 1.5 Gal
High rate: 3 Gal

PACKAGE

2.5 Gal. or
265 Gal. tote

PitMax+ works as an ultra-negative charged long-chained molecule. When PitMax+ enters the pit, it immediately starts drawing up the positively charged solid particles off the bottom of your pit, just like a magnet, dislodging solid buildup. The length and width of the molecules in PitMax+ allow it to stay in suspension, like a feather floating in the air, pulling molecules into suspension with it.

KEY BENEFITS

- Keeps solids from building up at bottom of pit
- Dislodging of solid buildup at bottom of pit
- Increase your agitation efficiency
- Increase uniformity and distribution of manure during pump-out

Expected benefits at high end of recommended rate:

- All benefits listed above
- Dislodging of >12" of solids annually at bottom of pit

HOW TO USE PitMax+

Apply 50% of recommended rate when pit is 25-35% full, then apply 25% of recommended rate when pit is 50% full, and apply remaining 25% of recommended rate 30 days prior to pump-out. For maximum performance, distribute product equally through pit pump outs. Please see the PitMax+ label for complete details on use, storage, disposal and warranties.
